

**STRONG | DURABLE | COST-EFFECTIVE**

## Resilient Rubber Tiles

A great rubber flooring solution for commercial and industrial applications.

Rubber resilient flooring is flexible and strong, as well as resistant to water and certain chemicals.

Additionally, this includes resistance to abrasion, cutting, heat, tearing, wear, fatigue, and abrasion.

We engineered and designed to meet customer demands for attractiveness, long-term durability, and low maintenance in high-traffic areas.

These are sufficiently flexible to form corners and sufficiently durable to withstand the impact of floor cleaning and traffic.

Over the years, this will be the optimal solution for every purpose, segment, and solution.

## Resilient Rubber Tiles Properties

Fire Retardant

Quiet & soft underfoot

Slip Resistance

Extensive range of colours and design

Seamless floor

PVC free, Phlate free, halogen free, does not shrink

Antibacterial & Antimicrobial

No wax

Flexibility – Fulfilled

Contains natural, sustainable rubber
