RUBBER TILE SPECKLES

Sunflex rubber tile speckles provide a smooth, uniform surface finish, making them adaptable, malleable and long-lasting. These are moulded rubber tiles having bevelled edges, pin connectors, straight edge, and interlocking. The dual recycled rubber surface is smooth and poreless, moisture resistant, anti-microbial, and features better ergonomics that reduce force and restore energy. They can be suitable for use as anti-fatigue rubber mats in sectors such as manufacturing, construction, landscaping, restaurants, garages, transportation and workshops.

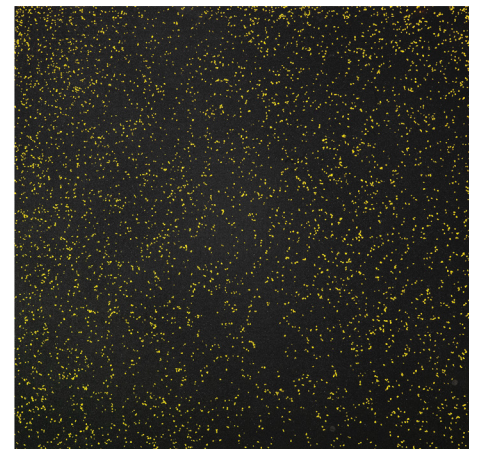

SUNFLEX COLOUR MIXER

Let us build your own customised colour rubber flooring. Rubber tile speckles can be customised in a variety of colours. The minimum order quantity is 1000 square feet.
